

High-Value Target protection

When security teams lack the visibility of exposed HVT personal data and their support staff OSINT vulnerabilities necessary to prevent impersonation, credential stuffing, spear phishing, smishing, and other attack techniques, it becomes challenging to predict pathways to compromise and implement reasonable preventative measures successfully.

Picnic protects against social engineering attacks that leverage HVT and support staff public information by proactively reducing the human attack surface and disrupting attacker reconnaissance and resource development.

Select Capabilities & Services

- Advanced Red Team reconnaissance
- Threat mapping and prevention
- Personalized exposure reports
- Removal of exposed personal and corporate PII
- Digital footprint cleansing
- Personal exploitation protection

CISO

Safeguard digital identity assets, respect customer privacy, counter social engineering risks, and ensure business continuity.

CRO & General Counsel

The reputation of key employees is often synonymous with corporate reputation. Proactively protect hard-won reputational halos for your organization and your leadership.

Physical Security Professionals

Keep high-value targets, their families, and their support staff safe by leveraging the same techniques threat actors use to hunt them in the digital and physical worlds.

Identity & Access Management Professionals

An intelligence-based approach to identity protection allows you to thwart adversaries before they can cause harm and provides the ability to prevent account takeover.
