Safeguard digital identity assets, protect customer privacy, counter social engineering risks, and ensure business continuity

The rapidly evolving threat landscape has made it challenging for CISOs to proactively safeguard their organization's revenue and achieve market growth. With their teams preoccupied with reacting to daily security threats, it can be a struggle to keep up.

Picnic equips CISOs and their teams to prevent most attacks, freeing them up to evaluate business and technical risks and monitor emerging threats. This empowers you to safeguard digital identity assets, protect customer privacy, counter social engineering risks, and ensure business continuity.

Everyone knows the human element is the single largest attack vector and security risk. Picnic is the first platform I've seen that prioritizes who inside the organization will be targeted, and how, based on human attack surface data. I believe their technology can change the game for security teams.

Chris Key, Former Chief Product Officer
at Mandiant and Founder of Verodin

Select Platform Capabilities, Services, & Use Cases

High-Value Target protection

Protect the human attack surface for executives, board members and employees with access to sensitive data.

Automated credential stuffing protection

Prevent reuse throughout the organization of compromised corporate and personal passwords that could be used in credential stuffing attacks.

Human attack surface management

Prioritize and mitigate corporate and individual risk at scale by combining external threat intelligence with human risk mapping.

Impersonation attack prevention

Proactively prevent impersonation attacks against your employees and your company.
