

Human Attack Surface Management

Different industries face different threat actors that leverage different TTPs. Because each organization's human attack surface footprint is different, TTPs used by threat actors vary, as does the impact they have on organizations. In this context, mapping threat and target intelligence to human risk and delivering targeted remediations is the key to a resilient cyber defense.

The platform enables threat-informed risk prioritization and targeted remediation by uncovering individual and corporate risks and predicting the most likely pathways of compromise based on threat actors, their TTPs, and their target industries. Equip your team with data-backed decision-making: relevant risk prioritization, relevant remediation guidance, and predictive risk reduction.

Select Capabilities & Services

- Threat intelligence prioritization with automated remediations: integrate with your SOAR, SIEM, IdP, and other tools for continuous human risk reduction
- Threat-informed Human Detection and Response with attack vectors mapped to MITRE ATT&CK
- Automated credential stuffing protection that accounts for compromised personal credentials

CISO

Safeguard digital identity assets, respect customer privacy, counter social engineering risks, and ensure business continuity.

Threat Intelligence Professionals

Outmaneuver threat actors by using their secret weapon against them. Identify, detect, prioritize, monitor, and remediate social engineering threats targeting your organization.

SOC Professionals

Reduce your MTTD by proactively and continuously managing your organization's human attack surface.

CRO & General Counsel

The reputation of key employees is often synonymous with corporate reputation. Proactively protect hard-won reputational halos for your organization and your leadership.
